Design Identification

How to Identify Interchange Designs

Interchangeability of pneumatic couplings is determined by PLUG DESIGN. Learn to identify the basic plug types, and coupler and plug interchange will become easy. There are SEVEN different designs currently used in the automotive market. Four of these seven cover more than 97% of all quick couplings used today. Amflo® and Tru-Flate® provide complete interchange to the four primary designs.

Tru-Flate Design 12/13-100 Series

This design is easily recognized because it has the shortest plug pilot in the industry; however, it has the widest metal section between the ball groove and the pilot. In addition, the sealing surface on the end of the plug is wider than other “interchange” designs. This design provides better sealing characteristics and longer seal life.

Industrial/Milton Design 12/13-200 Series

This design has been adopted by many coupler manufacturers, including Milton, Hansen, ARO, Lincoln and Schrader. It will work with either “sleeve” type or “push” type couplers. No matter what the coupler looks like, if it mates with this plug, it is an “Industrial/Milton Interchange” design. It can be identified by its 3/16" pilot and its flat-bottomed V-shaped ball groove. Conforms to ANSI (NFPA) T3.20.14-1990 dimensions.

ARO Design 12/13-300 Series

This design is characteristic of the ARO 210 series, and requires a coupler of proper matching design. Although similar in appearance to the “Industrial/Milton Interchange” design, it can be easily distinguished because its pilot is 1/8" longer and its ball groove is nearly round.

Lincoln Design 12/13-400 Series

The “Lincoln long-stem” design is the most easily identified design. The long 3/4" pilot is so distinctive it cannot be confused with other designs. It will only mate with couplers of matching design and size.

How to Interchange Couplers and Plugs

Design Selection

Similar name designs, whether manufactured by Amflo, Tru-Flate or a competitor, are interchangeable. NOTE: Designs are **not interchangeable** with other designs.

Size Selection

There are three BODY SERIES sizes – Standard 1/4" and Heavy Duty 3/8" and 1/2". To interchange, the coupler and plug must have the same body size.

Plug & Coupler Features

Construction Advantages

Unique performance features makes Amflo and Tru-Flate couplings work better and last longer, providing **100% RELIABILITY**

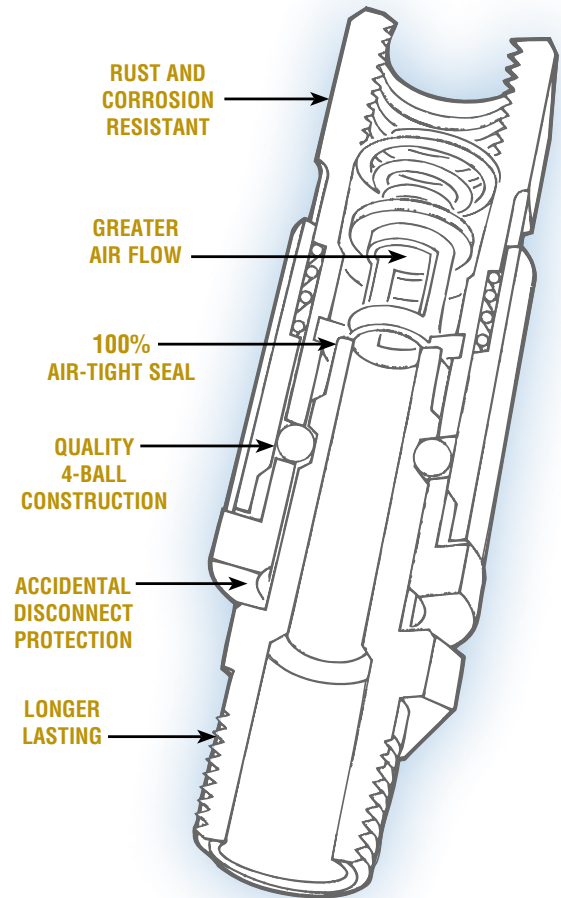

Greater Air Flow: Amflo and Tru-Flate's tubular valve construction passes more air at lower pressure drops than competitive blade or knife type valve designs.

100% Air-Tight Seal: Our spring-loaded, air-assisted valve design strengthens coupler seal as line pressure is increased. Extra locking carbon steel ball bearings provide a tighter fit and accurate alignment for superior performance.

Accidental Disconnect Protection: Amflo and Tru-Flate's sleeve guard reduces the potential for accidental disconnect and protects the sleeve under the toughest working conditions.

Lasts Longer: Prolonged seal life due to the tubular valve support, thus preventing the seal from moving into the air flow path. Eliminates the wear and damage that occurs with competitive blade or knife type valves.

TUBULAR VALVE - LONGER SEAL LIFE

Coupler / Plug Key Ring

These sturdy key rings are among the finest available. Similar to 1/8" pneumatic coupler and plug sets with steel construction and heavy nickel plating. Will provide years of reliable service and security.

Coupler / Plug Test Bars

Makes coupler and plug sales easy. Gives counter men a "surefire" way to quickly and accurately identify the proper 1/4" series plug for their coupler. Metal bar has each of four basic design plugs permanently fastened to the bar. Color-coded plugs on bar match correct coupler and plug package. Each design name is stamped in bar. Complete with handy hanger strap.

T-Style® Design

(One Narrow Band on Coupler Body)

The Tru-Flate Design Plug is recognized by the extremely short pilot; however, it has the widest metal section between the groove and the pilot. The sealing surface on the end of the plug is wider than other interchanges, resulting in better sealing and longer seal life. The Tru-Flate Design Coupler utilizes the tubular valve which supports the seal and allows more air flow at lower pressure drops than most competitive couplers. The protective collar guards against accidental disconnect.

Air Line Hook-Up Hints

Proper usage of compressed air power calls for filters to clean the air, regulators to control pressure, gauges to show pressure and lubricators to protect power tools. Air line systems also need hose and tubing to provide flexibility at the points of use. Couplers, plugs and fittings are the components that complete the systems for quick, easy, secure fastening to paint spray guns, blowguns, inflator gauges, chucks, power tools and pneumatic tire repair stands. Amflo® and Tru-Flate® components offer reliable, low-cost, readily available, proven ways to hook up your air line system.

LEADER HOSE
A short length of leader hose is recommended on a paint spray gun to keep the coupler and plug from scratching a painted surface.

DESICCANT AIR DRYERS
Deliver extremely clean, dry air to pneumatic system components. The use of desiccants will optimize the quality of compressed air to improve performance of air tools and ensure oil-free, dry air to auto paint spray equipment.

SAFETY BLOWGUNS
To comply with OSHA requirements, blowguns used on UNREGULATED air lines must be capable of restricting nozzle pressure to 30 PSI or less when dead-ended.

DIRECT AIR LINE CHUCKS

AIR HOSE

AIR LINE FILTERS
ALWAYS LOCATE YOUR FILTER AS FAR FROM THE COMPRESSOR AS POSSIBLE IN ORDER TO TRAP AS MUCH CONDENSATION AS POSSIBLE.

Amflo and Tru-Flate two-stage filters remove liquids, oil, water and large dust particles by centrifugal force, and small dust particles down to 40 microns by a porous element filter. Air line filters are vital to protect expensive air powered tools to keep them operating longer with greater efficiency.

Air Line Hook-Up Hints

AT-HAND® REGULATOR
Regulator allows custom pressure settings for various tools without having to go back to the compressor.

PRESSURE REGULATORS
Pressure regulators reduce line pressure to a usable range – a lower pressure than the compressor is set to deliver. Regulators maintain a steady flow of air regardless of the fluctuations that may take place in line pressure.

Pressure regulators should be used on air lines which feed impact wrenches in order to control tightening torque AND ON ALL AIR LINES THAT FEED STANDARD BLOWGUNS TO COMPLY WITH OSHA REGULATIONS. Regulators must be set at 30 PSI or less.

AIR LINE LUBRICATORS
MODERN AIR POWERED TOOLS NEED LUBRICATION! Lubricators protect expensive power tools. Ultrasonic generators deliver oil in a fine mist form. Lubricators are simple to adjust. Loading bowl can be filled from either side.

ALWAYS LOCATE LUBRICATOR AS CLOSE TO THE TOOL AS POSSIBLE. NEVER LOCATE A LUBRICATOR BETWEEN A COMPRESSOR AND FILTER REGULATOR, OR ON AN AIR SUPPLY LINE TO A PAINT GUN.

AIR LINE FILTERS

COMBINATION FILTER/REGULATORS
This unit is equipped with an automatic drain, providing the user with a clean, moisture-free air supply and saving money too!

The large filter surface area minimizes pressure drop, and is RECLEANABLE. The regulator portion of the unit is extremely stable in low-flow applications, and a balanced valve design prevents secondary pressure changes with fluctuating primary pressures.

This unit should always be located as far away from the compressor as possible.

BRASS THREAD ADAPTERS

RECOIL AIR HOSE
Self-retracting nylon or poly air hose is ideal for hook-up to portable air powered tools. By recoiling, it keeps "out from underfoot" by itself.

STANDARD BLOWGUNS
Must be used on PRESSURE REGULATED lines in order to comply with OSHA requirements. Set regulator at 30 PSI or less.

LEADER HOSE

RECOMMENDED AIR POWERED TOOL HOOK-UP
Air powered tools such as impact wrenches and panel cutters generate intermittent shock loads to make them work. If a coupler and plug are installed directly to the tool, this can cause PREMATURE FAILURE of the coupler.

ALWAYS USE A SHORT LENGTH OF LEADER HOSE BETWEEN THE TOOL AND THE COUPLER AND PLUG TO ABSORB AS MUCH OF THE SHOCK AS POSSIBLE.

FOR ANY APPLICATION, USE SLEEVE-TYPE COUPLER

FOR WALL MOUNT ONLY, USE PUSH-TYPE COUPLER

COUPLERS AND PLUGS

TRU-FLATE® Filters, Regulators & Lubricators

Filter / Regulator Combinations (Piggyback)

Accurate pressure regulation with maximum water and dirt separation, provided in a single, compact unit. The filter significantly increases the life of expensive equipment, such as air line tools, valves, cylinders and motors. The regulator employs a solid piston, which resists rupture, cracking or tearing under pressure or high cycle rates. Combination Filter/Regulators have 2 gauge ports and come complete with filter element, pressure gauge and locking knob adjustment. Maximum pressure (polycarbonate bowls): 150 PSI at 125° F primary, 2 to 125 PSI secondary. Maximum pressure (metal bowls): 250 PSI at 175° F primary, 5 to 250 PSI secondary. Temperature range: -10° F to +175° F.

Air Line Filters

Tru-Flate® Air Line Filters are used for all air line applications where efficient filtration is required. Filtration removes airborne solid contaminants, pipe scale, rust, condensate, etc., which may cause wear or failure of pneumatic components. Large filter element surface gives low pressure drop and long element life. The Mini series of air line filters offers a higher degree of filtration. All filters are complete with filter element and either manual or automatic drains. Maximum pressure: 150 PSI at 125° F with polycarbonate bowl and 250 PSI at 175° F with metal bowl. Temperature range: -10° F to +175° F.

Air Line Regulators

Tru-Flate® Air Line Regulators employ a solid piston and balanced poppet for excellent performance and longer life. The solid piston design is reliable for a broad range of demanding applications and is impervious to a wide range of lubricating oils and greases. Unlike diaphragms, the solid piston resists rupture, cracking or tearing under pressure, constant flexing or high cycle rates. It is impervious to most chemicals, provides accurate control and assures smooth, uninterrupted operation. Tru-Flate Air Line Regulators have fast reverse flow capabilities, allowing installation where dual pressures are required. Feature 2 gauge ports and include pressure gauge and non-rising, locking knob adjustment. Maximum pressure: 250 PSI primary, 2 to 125 PSI secondary.

Air Line Lubricators

Tru-Flate Air Line Lubricators are designed to provide proportional delivery of lubricating oil over a wide range of air flows. Ideal for most general applications. Externally adjustable with transparent sight dome for 360° visibility. Lubricator should be mounted as close as possible to application to ensure most effective distribution of oil to pneumatic components. Suggested lubricant: Petroleum-based oil of 100 to 200 SSU viscosity at 100° F and an aniline point greater than 200° F.

Except for the Mini series, Tru-Flate Air Line Lubricators may be filled while the system is under pressure. Maximum pressure: 150 PSI at 125° F with polycarbonate bowl. Temperature range: -10° F to +175° F. For pressures up to 250 PSI at 175° F, a metal replacement bowl must be ordered and installed separately. Metal bowls with sight glass are standard for the Hi-Flow Series.

Coalescing Oil Removal Filter

Removes more than 99.9% of liquid aerosols – oil or water – from pneumatic systems. Removes submicron – 0.3 micron – contaminants. For all critical applications where oil-free air is required. Liquids gravitate to bottom of element and re-entry into pneumatic system is prevented. Placing a Tru-Flate® Air Line Filter upstream from the Oil Removal Filter to act as a pre-filter will increase the life of the coalescing element and is recommended.
